ICA / SIO Recommendations 2018

1) SIO recognizes that in the currently fast evolving information and technology world, Record Managers and Archivists should reflect on the value of the work they bring to their organization and build an information strategy around this value.

2) SIO recognizes that information management is fragmented over many different professional areas and that Record Managers and Archivists working in International Organizations should be open to and share their experience and knowledge with other professional areas.

3) SIO recognizes that, given the rapid growth of digital information, it is even more imperative for records managers and archivists to ensure their organizations involve us as professionals in decision making related to software, long-term preservation and governance matters.

4) SIO recognizes that International Organizations have a moral obligation to protect personal data; however this should not compromise access to their archival holdings.
